At H2L2, our expertise allows us to mentor clients, fostering an understanding of what sustainable concepts truly mean in terms of end results and returns on investment. We believe in creating socially vibrant, ecologically restorative, and economically sound communities. Our portfolio is a one-of-a-kind collection of beautifully designed spaces for work, life and recreation that truly enhance the well being of people and ecosystems for both now and the future. We have developed a seasoned staff of LEED® accredited professionals to engage in an industry-wide commitment to sustainability that will change the way the built environment interfaces with the world around us.

**Stamper Square** • designed to LEED® Silver standards

## H2L2 LEED® Project Services

- Prepare LEED® feasibility studies and provide strategy recommendations to achieve Certified, Silver, Gold, or Platinum project certification
- Manage all project consultants' design, integration, coordination, and documentation in order to meet client's sustainability goals
- Manage LEED® certification submittal documentation via LEED® online
- Provide comprehensive LEED® project management tools for the General Contractor, and conduct construction site meetings and inspections to ensure LEED® compliance
- Develop customized Green Housekeeping policies and Green Education plans

**Shippensburg University** • designed to LEED® Silver standards

**Int'l School of Luxembourg** ▪ Sustainable Design Competition

**Temple University** ▪ designed to LEED® Certified standards

## 7 Elements of a LEED® Certified Building

1. Lower operating costs and increase asset value.
2. Reduce waste sent to landfills.
3. Conserve energy and water.
4. Be healthier and safer for occupants.
5. Reduce harmful greenhouse gas emissions.
6. Qualify for tax rebates, zoning allowances and other incentives in hundreds of cities.
7. Demonstrate an owner's commitment to environmental stewardship and social responsibility.

Sustainability is a frequently used and commonly misunderstood term in our 21st century American society. H2L2 defines sustainability as the fine balance of environmental, economic, and social interests. For this reason, we approach projects in a holistic manner - by ensuring that strategic goals do not focus too heavily on any single element in the equation, but improve the entire triple bottom line, benefiting planet, profit, and people.

It is due to this philosophy that H2L2 has been able to maintain its legacy for over 100 years.

Aside from the fact that sustainability is part of our company's history, our firm also appreciates the value of innovation. Designing with sustainability in mind requires creative solutions to your typical design problems. Our interest is also grounded in our belief that spaces should enhance an environment, not detract from it. Accepting and embracing the impact that architecture has on the health of our environments comes second nature to us. Our designs are crafted to endure the test of time by carefully integrating long-standing design principles with rapidly evolving sustainability practices.
